

## RAFINERY PLANT REDUCES MAINTENANCE COST WITH QUALITY TORQUE MULTIPLIERS

### ALKITRONIC® CASE STUDY

A refinery plant had a daily maintenance application that required two large valves be opened and closed twice per day for cleaning. Two low cost torque multipliers were being used for loosening and re-tightening the bolts on the valves.

#### INITIAL SITUATION

These tools were selected with the intent to speed up the maintenance process and reduce the overall maintenance cost. However, in a short period of time the low cost torque multipliers had become high cost tools. Each multiplier tool was being sent in for service and repair 3 or more times a year. A large portion of the refinery plant's yearly maintenance budget was being consumed by these two tools. After two years, the repair costs for these two tools had become three times more than the original purchasing cost for the tools. The short term solution had become a long term problem.

#### SOLUTION

Faced with a continuing high cost maintenance problem, the plant manager for refinery plant started searching for alternative tools to quickly resolve this cost issue. The plant manager contacted alkitronic® and asked for a representative to visit their facility and demonstrate some cost effective torque control solutions that were available to resolve their maintenance cost and fastening application.

**The CLD has a convenient  
automatic shutdown**

After viewing their application with the plant manager, the alkitronic representative of Mountz Inc. demonstrated the alkitronic CLD pneumatic torque multiplier as an option to resolve their maintenance application issue. The CLD torque multiplier shuts-off when the pre-set torque is achieved. It's a non-impacting tool and operates at a smooth, continuous rotation. The simple design has less internal parts that need to be serviced and not replaced often. After evaluating the alkitronic torque multiplier the plant manager chose to purchase the tools.

**Maintenance and service costs  
recrease with alkitronic torque multi-  
pliers**

The alkitronic torque multipliers were used in the maintenance process of opening and closing the two large valves daily. Overtime, the plant manager saw the maintenance frequency and costs for servicing the tools decline. Only alkitronic torque multipliers provide precision torque control, making it easier and often safer to assemble and service-threaded fasteners while reducing application problems and tool costs.

**TECHNICAL DATA OF THE CLD**

- ✓ Einfache 1-Fingerbedienung für Rechts-/Linkslauf, optionale Arretierfunktion für Dauerbetrieb.
- ✓ Simple 1-finger operation for right/left rotation, optional facility to enable the reaction to be locked in one position
- ✓ Robust motor housing from cast aluminium with proven pneumatic drive
- ✓ Proven high-performance gears, produced in a chip-free high-precision process to produce high loads with low wear
- ✓ On demand with optional silencer levels to reduce the noise from the motor exhaust
